

# STATEMENT OF PURPOSE

The increasing dependence on digital technologies in every aspect of modern society has underscored the urgent need for advanced computing solutions that are secure, intelligent, and contextually relevant. As a passionate and purpose-driven Computer Science graduate, I am committed to becoming a key contributor to Nigeria's technological advancement. I hold a Bachelor of Technology in Computer Science from Modibbo Adama University of Technology, Yola, where I graduated as a **First-Class** student. Building on this solid academic foundation, I now seek to pursue a Master's degree that will further equip me to design, implement, and lead transformative digital solutions that address Nigeria's developmental challenges.

Throughout my academic and professional journey, I have consistently applied theoretical knowledge to practical problems. I have led the design and development of several software applications, including an Online E-Examination System, a COVID-19 Patient Tracker, a Student Grading System, and a Biometric Verification System using fingerprint and facial recognition technologies. I also developed a Folder Encryption/Decryption System to enhance data privacy, and an ID Card Management System currently in use at the University of Agriculture, Makurdi. These projects, many of which were built in direct response to institutional or societal needs, demonstrate my ability to leverage computing to solve real-world problems.

Professionally, I have held impactful roles that have shaped my skills and vision. I serve as Chief Technology Officer at Al-Huda Computers, Yola. I worked as a Software Developer at CyberAutomation Academic, Yola, and as an Assistant Software Engineer at Joseph Sarwuan Tarka University, Makurdi. These roles have exposed me to the practical complexities of software deployment in academic and enterprise settings, deepening my expertise in software engineering, Cybersecurity and digital automation.

For my Master's specialization, I am particularly interested in **Software Engineering, Artificial Intelligence and Data Science**, and **Cybersecurity**—three interconnected fields that I believe are central to Nigeria's digital transformation. I aim to research and develop intelligent and secure software systems capable of enhancing public service delivery, protecting critical digital infrastructure, and supporting evidence-based policy implementation across government sectors.

The PTDF scholarship is a critical enabler in this pursuit. It offers not just financial support, but a platform to gain world-class training, exposure to global best practices, and access to cutting-edge research. More importantly, it aligns with my goal of contributing to Nigeria's self-reliance in digital innovation and human capital development.

Upon completion of the MSc program, I plan to return to Nigeria and work within government agencies or national institutions, where I can apply my expertise to develop secure, efficient, and scalable technology solutions. I am also committed to mentoring young technologists and supporting initiatives that promote digital literacy and innovation at the grassroots level.

The PTDF scholarship represents not just an opportunity for personal growth, but a strategic step toward building the technological capacity Nigeria urgently needs. I view this scholarship not merely as funding, but as an investment in national capacity building and am fully prepared to uphold its values and to contribute meaningfully to the nation's future.
